

PURPLAN®

ANA-safety installation

- safety device for tank trucks and transport tanks to ensure a controlled emptying
- emptying device with attention button and emergency stop
- protection against leakage of larger quantities of water-contaminating liquids during the container/ tank filling process via hoses
- corresponds to the water-rights legislation
- special model: triggering off by emergency stop instead of attention button

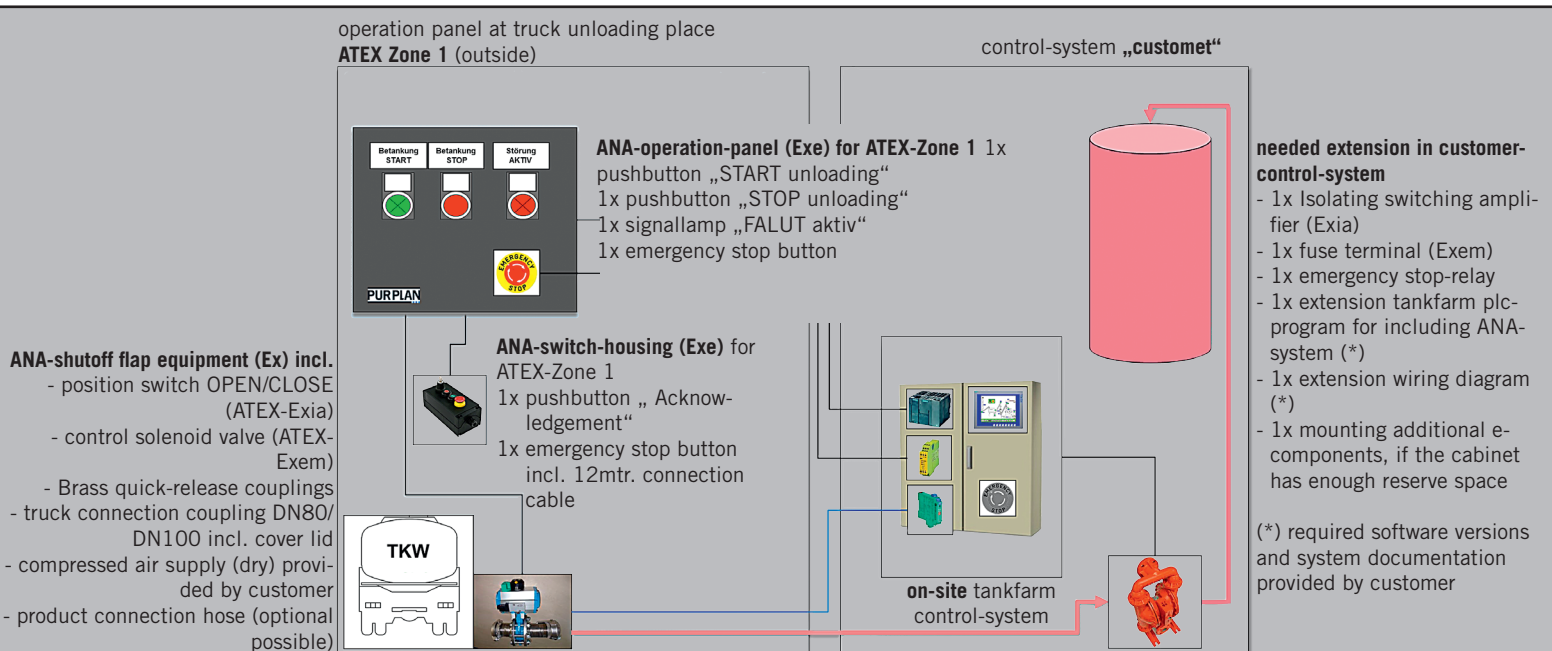

functional operation

- consists of a self-closing shut-off-device (valve), a control device as well as actuating device (an attention button and emergency stop)
- manually operated, self-closing safety device
- reliable reduction of the leakage quantity by having a maximum drainage time of 40 seconds
- causes/maintains operator's (e.g. tank truck driver's) permanent attention during emptying the tank truck (subject to the VdTÜV-code of practice 953)
- the following safety functions and conditions have to be fulfilled/ complied:
 - a. attention button to be used at regular intervals
 - b. interruption of the emptying process when either the attention button will not be used or when it will be used consistently
 - c. emergency button for immediate interruption of the emptying process
 - d. local restriction of the operator's scope for movement to a maximum of 12m from the tank truck

advantages:

- no need to have a collection tank of the appropriate volume when filling the tanks (TRwS785- determination of retention)
- easy operation
